

One and Two Point Perspective Practice

Step 1) Go into the hallway and draw what you see.

HORIZON – Where the bottom of the stairs meets the floor.

VANISHING POINT – The point where the railing meets the floor.

GUIDING LINES – the tops and bottoms of the lockers, the sides of the lights, etc...

TIP: Vertical lines will be parallel to your left and right sides of your paper, Horizontal lines will be parallel to the top and bottom of your paper.

Step 2) Sit at the corner of a desk in the classroom and draw what you see.

HORIZON – Where the back wall meets the floor

VANISHING POINTS – The point where two parallel lines of the sides of the desk meet in the distance (You can't actually see this in real life.)

GUIDING LINES – The edges of the desks from the vanishing points.

TIP – Draw as many desks beside each other as you can see, but do not let them go all the way to the vanishing points, this disrupts the optical illusion we are making.
